

apimanu®

Traditional Ayurveda Health Care

apimanu Diabgymna ayurveda® contains as an active ingredient *Asclepiadaceae acid*. This is an extract of a tropical plant growing in India, applied for centuries by indian doctors in order to control blood sugar, in accordance with ayurvedic natural naturopathy. One of the special attributes of the plants extracts is the ability to reduce the absorption of sugar. Asclepiadaceae acid increases the production of insulin. Not only through the islets of Langerhals, but also as tissue insulin. Examinations seem to confirm also, that Asclepiadaceae acid has the extraordinary ability to revive, even renew damaged and destructed insulin-building cells. Animal testing has proven, that Asclepiadaceae acid stimulates the generating of beta cells in the pancreases, hence increases or even revives the production of insulin. During a clinical test, diabetes patients were given extracts of Asclepiadaceae acid, with the result of significant improvement of their blood sugar levels.

Application:

Diabetes mellitus, Type 2

Recommended dose:

2 times daily 1 capsule 15 minutes before a meal with water.
